

Strive We Must

Competition pervades modern life, and it's here to stay. Before we wring our hands, just look where it got us.

BY DANIEL AKST

WHEN THE PHILOSOPHER SATCHEL PAIGE warned us not to look back (because something might be gaining on us), he couldn't have imagined how prescient he was, even though his own career in baseball pointed the way to the world we would all someday inhabit. Restricted to the Negro Leagues for more than two decades, Paige finally broke into Major League Baseball in 1948. Within a couple of decades black ballplayers had become dominant figures in the majors, the Negro Leagues had collapsed—and baseball had become a much more competitive place.

That will happen when barriers fall. Technology has some of the same effects: Newspapers find themselves competing with bloggers, traditional stores with Amazon, and singles bars with Cupid.com. Americans find that, thanks in part to technologies they invented or pioneered, they're competing with workers in India, China, and other far-off lands who are willing to do the same work for a lot less money. Even individuals in need of a Little League logo or a personal webpage are finding people who can do the job for less in Bucharest or Bangladesh.

Competition—the reality but also the metaphor—has somehow come to pervade modern life, much as we try to wish it away or pretend, as in five-year-olds' soccer games, that it isn't really going on. In some cities, the pre-school admissions process is as fraught as the mass ver-

sion of musical chairs with which top universities fill their classes. Stepped-up competition is apparent in the workplace as well. Companies are less willing or able to carry unproductive employees, but in today's competitive business environment even productive workers can receive a pink slip when circumstances persuade executives that cutbacks make sense. Companies these days are less constrained by sentiment or tradition when considering whether to outsource, move, or shut a plant. A study earlier this year by economists Thomas Lemieux, W. Bentley MacLeod, and Daniel Parent found that "the overall incidence of performance-pay jobs has increased from a little more than 30 percent in the late 1970s to more than 40 percent in the 1990s." Bonus, commission, piecework—whatever you want to call it, pay for production makes work seem a lot more competitive. When *Fortune* magazine reported on white-collar workers "fired at fifty" who couldn't find comparable positions, the best advice from the experts was to embrace "involuntary entrepreneurship," which of course means competing on your own without a company-provided pension, health insurance, sick days, or vacation.

Globalization has spurred many changes. Firms that once shuffled along in cozy domestic oligopolies now find themselves battling overseas competitors. Deregulation of airlines and utilities, the dismantling of trade barriers, growing Third World productive capacity, rapidly evolving technologies, the weakening of restrictions that kept banks pent up within states and out of the securi-

Faster! While Americans complain of job stress, only a fraction of the population is working harder. Most Americans have more leisure time than ever.

ties business—these developments and so many others have helped foster a vastly more competitive commercial environment than existed a generation ago, an era well within living memory for many American workers, who recall a time when U.S. industrial might was unchallenged.

Even the home, ostensible refuge from worry and trial, has become a competitive arena. The overturning of traditional roles has meant that spouses may find themselves vying not just to see who can get out of doing the laundry, but for power, status, and renown as well. Consider the case of Ségolène Royal and her partner, François Holland, both ambitious French politicians and rivals for the same party's presidential nomination. Surely, electoral jockeying made for some frosty breakfasts around their house (and in fact the couple recently parted ways). As for the rest of us, competition for filial

affection has radically increased in many families thanks to the increased prevalence of divorce, in which parents sharing custody may find themselves in an authority-eroding contest for the favor of offspring who all too easily play one off against the other.

How did we get here? As is so often the case in American life, we're victims of our own success. Despite a remarkable amount of hand-wringing, given the circumstances, life in this country for most of us is better than it has ever been—longer, fairer, freer, and richer. And that's what makes for so much competition. More of us than ever before consider that we have a reasonable shot at an Ivy League education, a beachfront property, or a partnership in a law firm. The same is true for less glittering prizes. Discrimination

persists, of course, but there's less of it. Newspaper help-wanted ads no longer specify gender or faith, and real estate ads (to say nothing of deeds) have dropped their restrictions as well. In the political arena everyone's got a lobby, it sometimes seems, except the country at large, and the old, nowadays more numerous and healthier than in the past, compete all too effectively for resources against the young.

Another factor in the seeming competitiveness of modern life is the astonishing efficiency of modern markets, as well as the acceptance of markets as the prevailing metaphor for so much human activity. In the public realm such one-time monopolies as the Postal Service, the local public school, and the regional electric utility, now have to compete against (respectively) UPS and

FedEx, charter and magnet schools, and alternative providers of electricity, with whom consumers can contract. Market participants—that's us—have better information than in the past as a result of the ratings, rankings, and reviews that are cropping up everywhere. Users report their experience with products on websites such as Amazon and Epinions; professors and schoolteachers are bluntly rated on sites such as RateMyProfessors.com (which covers sexual appeal as well as pedagogy); and publications including *Consumer Reports*, *U.S. News & World Report*, and various city magazines rate and rank for a living, so that sooner or later someone is likely to be anointed best dermatologist—or, for that matter, plumber—in Cleveland.

The irony is that it was competition, in the first place,

that helped bring about the richer, fairer, freer—and intensely more competitive—society we have become. All the key forces at work—social change, technology, and globalization—are as plain as day on the baseball diamond. Time was, a young white fellow with a live arm, honed perhaps in sandlot games or by throwing against the barn wall, was competing only against others like himself. Today he's competing against the best the world has to offer. Not only is the sport open to blacks and other minorities from this country, but a significant proportion of today's players are foreign born. Besides the Latin Americans now so common in the big leagues, Korean and Japanese ballplayers are starting to turn up. (Professional basketball and hockey also draw on an increasingly global talent pool.) Foreign squads have been beating American teams in the Olympics and other international competitions for a while now, not just in baseball but in basketball as well. Free agency, meanwhile, has forced baseball team owners to compete

Winning really isn't everything. What's inspiring about sports heroes like Babe Ruth is that the character and talents they hone through competition show us the possibilities of human excellence.

for players, bidding up salaries so that now even a journeyman reliever earns a small fortune. Nor is milking cows any longer the primary builder of wrist strength. Just as travel and telecommunications technologies have made it possible to recruit more widely, advances in training, dietary science, and medicine have enabled players to hit the ball farther and throw it faster.

College admissions is another arena where competition has blossomed riotously. When I applied to college, back in the raccoon coat days of 1974, you had to complete a separate time-consuming application for each institution; Yale's was so daunting that I didn't even bother. I applied to five or six schools and visited none. Despite only decent grades and a mediocre math showing on the SATs, I got into some excellent institutions, and attended one without hysteria, consultants, or prep courses. My graying friends and I agree that we wouldn't stand a chance of admission into

our own alma maters today. Students are much more focused and accomplished, and the marginal cost of an additional application has plummeted; the rise of the "Common Application" (often filed electronically) has made it easier to apply to many more schools than I did, and high school students are doing just that.

About those spectacular students: You can expect to see more manufactured greatness in the years ahead, and even tougher competition in many arenas, now that genius looks more likely to be made than born, at least in the eyes of those who study such things. Chess prodigies are proliferating, for example, thanks to computer-based training methods, but in fact prodigies are proliferating in many different fields as a result of better training, determined parents, affluence, and, yes, tougher competition. "The standards denoting expertise grow ever more challenging," Philip E. Ross wrote last year in *Scientific American*, where he was a contributing editor. "High school runners manage the four-minute mile; conservatory students play pieces once attempted only by virtuosos." Ross reports on studies comparing tournament chess from 1911 to 1993 which found that modern players made far fewer errors, and that today's top chess

players generally are much better than the grandmasters of yore.

Circumstances and ideology these days are supporting all this competition. The collapse of communism almost everywhere (in China it lives on in name only, supported by something like a capitalist frenzy) has left one brand or another of the market economy as pretty much the only game in town. Pro-competition ideologies (and such intellectual forebears as Adam Smith and Milton Friedman) are in the ascendance, and economists generally have expanded their turf across almost the whole of human activity (including such highly competitive arenas as sex), sharpening our understanding of

competition's role in our lives. Evolutionary biology, perhaps the other preeminently influential academic discipline of our times, also has competition at its core. Our view of courtship nowadays is as likely to be influenced by Charles Darwin as Jane Austen, and thanks to online dating (the sexual equivalent of eBay?), the Internet gods are playing nearly as big a role as Cupid.

Competition has also been rescued to some extent from the class-based doghouse in which it dwelt for so long. In the bad old days, after all, trying too hard was considered poor form; success was supposed to come easily, like one's wealth and position, and not require any of the sweaty striving associated with the lower orders. Those days are blessedly past—we are all sweaty strivers now—yet we remain ambivalent about this state of affairs. We feel nostalgia for the ethos of good form, and for the freedom from class anxiety we might have felt in a more static society. Who among us has not referred, at some point, to competitive modern life as a rat race? Which of us has not vowed, sooner or later, to foreswear it, presumably in favor of a return to our
